

Cpt S 321 Homework Assignment

Washington State University

Submission Instructions:

- Please follow the instructions below closely. If you are not comfortable with version control, please check **the turn-in tutorial** (Canvas -> Modules -> Course Information).

Assignment Instructions:

1. Create a GitLab repository on the EECS server that you will use for **all HW Assignments** in this class. Call it "CptS321-**FirstName_LastName**-HWs". Create an empty solution (aka blank solution) in this repository. Check here how to do it in **Visual Studio (VS)** (in you decide to go with Windows and WinForms) and in **Rider** (if you decide to go with cross platform development).
2. Create a GitLab repository on the EECS server that you will use for **all in-class exercises** in this class. Call it "CptS321-**FirstName_LastName**-in-class-exercises". Create an empty solution (aka blank solution) in this repository as well.
3. Make both repositories **private**.
4. For both repositories, add **the instructor and ALL TAs** as part of your team (see syllabus for the EECS Gitlab ids – note that sending it to the wsu emails will not work as we cannot accept those invitations with our EECS accounts). Make sure we are **"Maintainers"**.
5. For both repositories, add a readme file where you will write your full name and WSU ID.
6. For both repositories, setup gitignore.
7. For both repositories, tag the versions that you would want us to grade with the tag "HW0".
8. **Record a video to demo your HW (call it "Demo_HW0-FirstName_LastName")**. See the "Pre-Recorded Demos Instructions" page on Canvas for guidelines on what you would typically discuss in the videos for your HWs. For HW0 only:
 - o Your pre-recorded video will be longer on the version control as you want to showcase both repos and show that you have completed all the steps above.
 - o No need to discuss "Design / Architecture" as there is no code for the submission
 - o No need to discuss "Feature / Implementation" as there is no code for the submission
9. On Canvas -> Assignments -> Assignments -> **Upload your pre-recorded video by the HW deadline**.
10. Sign up for a live demo with the TAs before the deadline.
11. Submit the links to your repos (urls pointing to the main branches) in the survey of w2.2 by the Thursday of Week 2.
